Education

Fordham University, Gabelli School of Business

Expected December 2026

Master of Science in Finance, Concentration in Investment Management

- Relevant coursework: Corporate Finance, Investment Banking, Financial Markets, Investment Applications, Fund Strategies, Algo Trading
- Proofreader for Professor's textbook, *The Power Transition Portfolio: Systematic Geopolitical Analysis*; Capital Markets Club (IB, PE, VC)

Boston University

May 2024

Bachelor of Arts in Computer Science, Minor in Economics

- Relevant coursework: Micro/Macroeconomics, Market Organization, Economics: Legal Issues, Linear Algebra, Discrete Math, Probability and Statistics, Algorithms and Data Structures, Machine Learning Analytics, Data Science, Software Engineering, Computational Theory
- Treasurer/Founder at PM Ready (Technical Project Management Club), Student Representative at Ignite Computer Science Council

Certifications / Competitions

- Wall Street Prep Financial and Valuation Modeling, Bloomberg Market Concepts, Securities Industry Exam
- Ranked 19th globally (20,000+ participants) – IMC Global Quant Trading Challenge

Professional Experience

RBC Capital Markets

New York, NY

Incoming Quantitative Trading Summer Analyst

June 2026 - August 2026

- Selected for Quantitative Trading team focused on systematic market-making strategies

Voicera

Miami, FL

Software Engineer, Venture Capital Investor Relations

November 2024 - June 2025

- Assisted with investor targeting and pitch development using market research to support capital raising initiatives for a \$15MM valuation
- Gained direct exposure to early-stage startup financing dynamics and investor relations, including valuation and fundraising strategies
- Delivered bi-weekly, production-ready feature enhancements and critical bug fixes across JavaScript/TypeScript front-end and Node.js/AWS Lambda back-end, reducing latency by 20% to support real-time inference pipelines
- Led the complete redesign and re-implementation of core user flows (dashboard, login/signup) using React and TypeScript, improving user engagement by 25% and streamlining data capture by securely integrating with AWS Cognito and IAM for scalable user OAuth
- Collaborated with data scientists to optimize ML model throughput and latency for real-time data processing
- Optimized core RESTful APIs to integrate with AWS services (S3, DynamoDB, etc.), reducing data retrieval latency by 17%
- Offered promotion to Senior Software Engineer and Equity Partner; declined to pursue full-time graduate studies in Finance

City of Boston

Boston, MA

Investment Financial Analyst, Real Estate

September 2023 - December 2023

- Conducted quantitative research in Python across 67 ZIP Codes to identify zoning areas with the highest permit approval probability
- Synthesized real estate trends and statistical analysis into policy recommendations from 5+ datasets and unconventional data sources
- Analyzed macroeconomic indicators (e.g., interest rates, GDP growth) and local market trends (e.g., rental rates, vacancy rates)
- Transformed 500,000+ row datasets into investment insights, mirroring due diligence methodologies for real asset underwriting
- Built sophisticated predictive machine learning models to inform resource allocation, achieving a 71% accuracy rate of chosen models
- Communicated findings in presentations in front of 200 conference participants, demonstrating the impact of quantitative analysis

Nextworld

Denver, CO

Summer Software Engineering Intern

May 2022 - August 2023

- Architected a re-platforming of the internal help desk infrastructure using TypeScript, Angular, and Jasmine unit testing, achieving a 20% improvement in technical problem response time — analogous to optimizing operational pipelines in financial systems
- Engineered API endpoints connecting to 2 external issue ticketing software and utilized Postman to develop a proof of concept

Projects

IMC Prosperity 3 Global Quant Trading Challenge

Ranked 19th globally out of 20,000+ STEM students

- Executed Python-based algorithmic trading strategies in 5 rounds of the trading competition, achieving a ranking of 19th out of 20,000 teams as of round 2, leveraging data access or visualization libraries such as Pandas, NumPy, & Matplotlib
- Strategies included market making, ETF statistical arbitrage, options scalping, cross-market arbitrage, and informed counterparty trading

Quantitative Finance Research Projects - [Link to project](#)

- Developed and implemented a series of 14+ quantitative finance projects with the goal of designing a personal trading algorithm, focusing on portfolio optimization, asset allocation, algorithmic trading, and financial risk management
- Implemented portfolio optimization models using Mean Markowitz-variance analysis and efficient frontier techniques, incorporating risk-adjusted returns and constraint-based asset allocation. Designed and backtested trading strategies such as moving average crossovers and momentum-based trading, analyzing key metrics like CAGR, volatility, and drawdowns
- Implemented advanced financial modeling, time series analysis, and trading strategies including optimizations and derivatives pricing

Skills & Interests

Skills: Python, Excel, Equity Analysis, Financial Analysis, Data Analysis, GitHub, AWS (DynamoDB, Cognito), REST APIs, Visualizations

Hobbies: Water Polo (Junior Olympian/1st Place U.S. Regional Champion), Skiing, Snowboarding, Coding, Financial Markets
